

## **To:** The Honorable Members of the California State Senate **From:** Kathryn Scott, Senior Vice President, State Relations and Advocacy **SB 1432 (Caballero) – Support**

California hospitals are among the safest buildings in the communities they serve. After more than two decades of work and billions of dollars spent, nearly all hospitals will be able to withstand a major earthquake. Now hospitals must comply with a different standard by 2030 that requires them to be fully operational after a major earthquake **or close their doors to patient care**.

While hospitals are working to comply with this requirement, many will not meet the 2030 deadline. Therefore, the California Hospital Association (CHA), and those listed, request your support of Senate Bill (SB) 1432, which would extend the deadline for the 2030 mandate and require the state to analyze and report to the Legislature on the mandate's impact on access to health care in communities across the state.

Specifically, the bill:

- Provides all hospitals with an initial three-year extension to 2033, upon submission of a seismic compliance plan and Non-Structural Performance (NPC) Evaluation report to the Department of Health Access and Information (HCAI)
- Provides up to an additional five-year extension, at the discretion of HCAI, depending on hospitals' submission of information regarding complexity of a construction project, financial capability to support seismic compliance, and/or the impact on access to care in the community
- Requires that to obtain an extension beyond the base three years, hospitals must meet planning, development, and construction milestones
- Mandates that all hospitals must strengthen their disaster plans to ensure patients continue to receive the care they need during and after a disaster, and workers have a clear picture of the patient care plan following an earthquake

SB 1432 seeks greater partnership between hospitals and the state to comply with the law. Understanding the significant impact that construction would have on access to hospital care will be critical. This proposal would also require HCAI's Office of Statewide Hospital Planning and Development (OSHPD) to:

- Provide technical assistance to hospitals to assist in the development of construction plans
- Convene community stakeholders and report findings to the Legislature to understand the impact of the seismic-related construction on hospital services and patient access to care

Extending this deadline would ensure that 2030 seismic compliance can be approached in a systematic way that preserves access to care. A transparent and comprehensive understanding of the scope, scale, and cost of seismic compliance is essential for the state to support its work to ensure safe, operational hospitals and to minimize disruption of patient care for all Californians.
